What are microbeads? 甚麼是微膠珠？

What?

是甚麼？

Microbeads are a kind of microplastic (size of less than 5mm) added in some rinse-off personal care and cosmetic products with a specific function for scrubbing, exfoliating or cleansing.

微膠珠是一種微塑料(尺寸小於5毫米)，用於一些沖洗型個人護理和化妝品中，具有磨砂、去角質或清潔的特定功能。

Why?

為甚麼？

Microbeads, which are found in some products are harmful to marine animals and the ecosystem. These do not degrade over time and transport toxic chemicals into marine life, causing them harm. Opting for microbead-free skincare & personal care products can help protect both the environment and your health.

某些產品中含有的微膠珠對海洋動物和生態系統有害。它們不會隨着時間轉移而降解，並將有毒化學物質帶入海洋生物體內，對其造成危害。選擇不含微膠珠的產品有助保護環境和您的健康。

How?

怎麼辦？

When selecting products, check for microbeads in the ingredients, particularly in those claiming to polish, add shine, or shimmer, and opt for natural alternatives when feasible. Avoid washing household cleaning products with microbeads down the sink. Instead, strain the product through a coffee filter to collect the beads and dispose of them in the trash.

選擇產品時先檢查成份中是否含有微膠質，尤其是聲稱具有拋光、增加光澤或閃亮的產品，盡可能找尋天然替代品。避免在鋅盤清洗含有微膠珠的家用清潔用品。反之可使用咖啡過濾紙將之過濾，將當中的微膠珠再另行棄置。
